Could it be that you close Smuxi by clicking the "Windows Close" (X) button? Because that quits Smuxi.

If you don't do that but Smuxi closes by itself, try starting it in debug mode from a terminal like this: `smuxi-frontend-gnome --debug` and pastebin the last 20 lines or so after it happened.

As silly as this is, that is the exact issue.

I am so used to closing apps and having them continue in the background (especially when they have a tray icon).

Is there a way to adjust this behaviour, as it's incredibly annoying.

I will probably change the defaults for Unity that closing the window does not quit the application. You can already configure this in Preferences -> Interface -> Notification -> Notification Area Icon, select "Show when window is closed". This setting changes the behavior of the close button to just minimize to tray instead.
