Subject:	bitcoin pattern false positive		
Description:	(I'm guessing this bug was introduced in https://github.com/meebey/smuxi/commit/9469328cee27d79c00b6e89c7a4e724aa29e1816 ;)) Steps to reproduce: 1. Someone mention an ethereum transaction ID in a channel, e.g.: 0x5cdc7e220fd116af780e64a04392b25c1a3d1c86d1b2ca2fea821294290e0f3c Current results: Part of the ETH-transaction ID gets underlined as a bitcoin-URI link: 392b25c1a3d1c86d1b2ca2fea82129429 Expected results: Shouldn't highlight as link. Implementation suggestion: my guess is that we need a similar approach to what I did here: https://github.com/meebey/smuxi/commit/dd7d45f46e13a22dfacb2c57a00a2324c56328ae , since the bug I fixed there was similar (finding a message pattern inside a bigger message, when the regex should try to find delimiters).
