

Smuxi Issues [FROZEN ARCHIVE] - Bug # 112: URL handling

Status:	Closed	Priority:	Urgent
Author:	Ryan Smith-Evans	Category:	Frontend GNOME
Created:	09/01/2008	Assigned to:	Mirco Bauer
Updated:	12/17/2008	Due date:	
Subject:	URL handling		
Description:	Something appears to be breaking the URL handler for clicking links. Appears to happen in the Smuxi channel only.

- Status changed from New to Assigned

ajorg pointed me to this issue and I was checking what is the cause... I thought for a while gnome vfs is the issue, but it's not!

I can reproduce this issue and I found the cause of it!

When you select an user in the userlist from that point on opening URLs will fail (be ignored actually).

This is caused by a check in the opening URL code:

```
<pre>
489     if (e.Event.Button == 3 && _PersonTreeView.Selection.CountSelectedRows() > 1) {
490         e.RetVal = true;
491     }
</pre>
```

and from an `[[HasSelection]]` override that says the page has a selection if an user is selected in `[[GroupChatView]].cs`:

```
<pre>
59     public override bool [[HasSelection]] {
60         get {
61             return base.HasSelection || _PersonTreeView.Selection.CountSelectedRows() > 0;
62         }
63     }
</pre>
```

SVN revision r327 and r330 show that affected code and a fix that was done only to one place. That might fix this issue, have to test.

- Status changed from Assigned to Closed

- 1 set to fixed

It was not as simple as I expected instead it was pretty challenging! Changing the `[[HasSelection]]` property causes regressions in other areas because they rely on that behaviour. The fix was to destroy the selection when we leave the user list, the URL code checks now for selected text only and the user list context menu does not grab the focus anymore (else we would loose the selection). Fixed in SVN revision r436
