Implementation of notification popups. (closes: #176)

Complete implementation of notification popups with action, icon, update,

append and sound support and as defined in

Desktop Notifications Specification 0.9 / 1.1:

<http://www.galago-project.org/specs/notification/0.9/>

<http://people.canonical.com/~agateau/notifications-1.1/spec/>

and Ubuntu's Notify-OSD Guidelines:

<https://wiki.ubuntu.com/NotificationDevelopmentGuidelines>

Tested successfully against notify-osd 0.9.23, notification-daemon 0.5.0, and
xfce4-notifyd 0.1.0.

Includes a hack for notification-daemon-xfce as that is not conformant with
the 0.9 specification and sends broken NotificationClosed dbus replies.

Maybe some newer framework should be used instead, see: <https://wiki.ubuntu.com/DesktopExperienceTeam/ApplicationIndicators>
