Subject:	Detect nicknames in replies and replace with colors		
Description:	Often on IRC you reply and it's not that simple to find a message in discussion you said to some particular person. This is because all replies are completely black, no nick-colors. If the nickname <code>_in_</code> the reply would use the nick-color then you would find the reply to a specific user much faster. E.g.: <pre> <luser> hi meebey, how are you? <meebey> [color]luser[/color]: I am fine </pre>
