Complexity:	Low		
Subject:	Reconnect loop with bouncers (irssi-proxy)		
Description:	Smuxi is going into an endless loop once the connection was lost to an irssi-proxy. The reconnect feature is not passing the password resulting in a failed login attempt. irssi-proxy just closes the network socket without any error message and Smuxi tries to reconnect, and so on....

Pass the password directly to the IRC library (closes: #303)

Smuxi was passing the password to the IRCd instead of the Login() method of
the IRC library. This leads to incorrect reconnect attempts as the IRC library
does not know/remember the password.
