Subject:	SSH-password in terminal			
Description:	Starting smuxi-frontend-gnome with a terminal may confuse the user, as the connection dialog starts at the front-end, nevertheless the password is requested at terminal. In combination with the "ssh-port is not yet ready retrying messages" this may confuse the user. Starting frontend should use frontend to handle this situation

This needs a fix in the openssh client, see:

Alternatively the openssh tunnel setup needs to be replaced with a managed SSH implementation, this would also solve the issue to pass passwords securely on Linux and Windows.
