Subject:	Discussion monitor		
Description:	It would be great if Smuxi had something like Quassel's Discussion monitor (or irssi split windows). With the ability to create more than one (to beat Quassel HAHA). Each discussion monitor would be configurable : - What type of events have to be on that monitor (just messages, just highlights, over channel event like part/join) - What are the channels/queries/server should events that should be logged in the monitor It would be perfect if the monitors were draggable with dock-windows like MonoDevelop ones.
