Probably related to my Thread.Abort() issue. Couldn't reproduce it with a different user, thus postponing to 0.7.0.

Zhila can you try to reproduce this and report back?

I can reproduce this freeze issue on Windows XP. It continues though about after 20 to 30 seconds but is still very annoying.

10/03/2008 06:32 PM - Mirco Bauer

Looks like GNOME tries to connect to gconfd at startup. Supplying gconfd-2.exe and lib\GConf\2\libgconfbackend-xml.dll seems to fix this issue. But gconfd-2.exe needs to be spawned before starting smuxi (which is ugly, double ugly for dos window). So either I need to ship those + a startup script or convince GNOME to not use gconf at all.
