

Smuxi Issues [FROZEN ARCHIVE] - Bug # 549: Cannot configure/connect to an IRC server with SSL on a port other than 6697 via GUI

Status:	Closed	Priority:	Normal
Author:	Jo Shields	Category:	Engine IRC
Created:	11/25/2010	Assigned to:	Jo Shields
Updated:	12/18/2010	Due date:	
Complexity:	Low		
Subject:	Cannot configure/connect to an IRC server with SSL on a port other than 6697 via GUI		
Description:	It is not possible to connect to an IRC server using SSL unless it's on port 6697. This is because the port number is overwritten with 6697 whenever the <code>f_UseEncryptionCheckButton.Clicked</code> event is called - and this event is called whenever <code>f_ValidateServerCertificateCheckButton</code> is set to Active (GTK ToggleButton Toggled signals are triggered by <code>gtk_toggle_button_set_active</code>). So when the server configuration is loaded from the backend config file, the port is set to the value in the file, then overwritten with 6697 if SSL is enabled. The attached patch fixes this, by setting the port number AFTER reading the SSL state from the config file - so 6697 is set, then overwritten by the config file value.

Fixed connecting to an IRC server with SSL on a port other than 6697 via GUI (closes: #549)

It is not possible to connect to an IRC server using SSL unless it's on port 6697.

This is because the port number is overwritten with 6697 whenever the `f_UseEncryptionCheckButton.Clicked` event is called - and this event is called whenever `f_ValidateServerCertificateCheckButton` is set to Active (GTK ToggleButton Toggled signals are triggered by `gtk_toggle_button_set_active`). So when the server configuration is loaded from the backend config file, the port is set to the value in the file, then overwritten with 6697 if SSL is enabled.

This patch fixes this, by setting the port number AFTER reading the SSL state from the config file - so 6697 is set, then overwritten by the config file value.
