| Subject: | Set PATH before starting Smuxi on Windows | | | |
| Description: | From time to time Smuxi users report issues starting Smuxi on Windows after installation. If the user has a | | | |
| | GTK+ besides the GTK# install in the PATH then Smuxi will fail to start as GTK# will try to load the libraries | | | |
| from the GTK+ install and fails. As Smuxi knows where GTK# is installed (as it checks the | | | (# is installed (as it checks the registry for it) it | |
| | can create a start script which sets PATH | can create a start script which sets PATH automatically to the right location. | | |

[Frontend-GNOME] Prepend GTK# to PATH on Windows (closes: #551)

GTK# on Windows relies to load the GTK+ libraries from the right location via the PATH which it extends during the install. This works just fine as long as PATH is not including any other GTK+ library paths. For this reason we simply prepend the GTK#'s library path to the PATH environment variable when running on Windows.
