[Frontend-GNOME] Fixed last\_focus\_time window manager warnings (closes: #579)

<rant>

The API interaction of GTK+, X11 and freedesktop's notifications are driving me nuts. The window manager will only move the focus of a window to another if the timestamp of the event is new enough. And here begins the road of insanity.

The notification DBus API is not exposing the timestamp of the clicked action button, neither is it possible to obtain the current timestamp of GTK as it only exposes the timestamp of the currently \_processed\_ event via `gtk_get_current_event_time()` [0] and guess what, as this is a D-Bus callback `gtk_get_current_event()` is NULL and thus `gtk_get_current_event_time()` returns 0. Of course the window focus will not change with a 0 timestamp. And no, you can't just pass a unix timestamp here or something sane because then the window manager will go crazy like this:

Window manager warning: last\_focus\_time (1300750862) is greater than comparison timestamp (4830419). This most likely represents a buggy client sending inaccurate timestamps in messages such as \_NET\_ACTIVE\_WINDOW. Trying to work around...

Window manager warning: last\_user\_time (1300750862) is greater than comparison timestamp (4830419). This most likely represents a buggy client sending inaccurate timestamps in messages such as \_NET\_ACTIVE\_WINDOW. Trying to work around...

After that it will stop to change the focus of any window for a while.... yay

The only way to "fix" this issue would be to fetch the current timestamp of X11 which is not possible with GTK+ because it only get's exposed by GDK's X11 specific API [1] which is not exposed at all in GTK#.

So we will have to live with this annoyance for now and not pass a timestamp and use `gtk_window_present()` [2] instead.

Alternative would be to P/Invoke `libgdk-x11-2.0.so` directly which I am really not in the mood for.
