Complexity:	High		
Subject:	Sync config cache when connecting to smuxi-server		
Description:	Right now the config cache gets populated when keys are requested which are not yet cached. This means that each requested uncached key will make a remoting call. The worst case is when all keys are requested, say when the user open the preferences dialog. If Smuxi would pre-populate (sync) the complete config when connecting to the smuxi-server then there would be no load time at all.
