<b>Complexity:</b>			
<b>Subject:</b>	Split screen for history viewing and active chat at the same time		
<b>Description:</b>	<p>I have seen this in another IRC client, I think it was mirc. When you scroll up to view history, part of the screen splits up going through history at the top, and the other part stays current with chat. How much of the window is dedicated to history and how much of it is to current chat can be controlled by moving the dividing bar between them.</p> <p>Useful for discussing things said earlier on, and generally for looking at previous things said without losing out on chat for that channel.</p>
