Complexity:			
Subject:	Proper Contactlist for xmpp		
Description:	<p>Current xmpp-contactlist is a default groupchat.</p> <p>Either create groupchat sub-class (wasteful of screen space, as the chat window is only used for presence messages)</p> <p>Or create a custom contactlist chat window.</p> <p>the latter would enable multiple lists next to each other for xmpp-contact groups.</p>
