Subject:	setting a server's hostname to "" causes that server to disappear from the list		
Description:	actually the server is still accessible by doubleclicking the protocol's name in the serverlist. trick doesn't work anymore when multiple servers have an empty hostname. for xmpp it would be nice to leave hostname empty and only enter user@xmppserver.org in the userfield. hostname will then only be set if "xmppserver.org" isn't the actual address that one should connect to.
