SmartIrc4net - Bug # 854: server properties: PREFIX is parsed incorrectly

Status:	Closed	**Priority:**	Normal
Author:	Ondrej Hošek	**Category:**	
Created:	06/25/2013	**Assigned to:**	Ondrej Hošek
Updated:	07/02/2013	**Due date:**	
Subject:	server properties: PREFIX is parsed incorrectly		
Description:	The format of the value of the @PREFIX@ server property is @(modes)prefixes@, e.g.		

(ov)@+

or

(qaohv)~&@&+

The current code splits the string at the @)@, but doesn't skip the initial @(@. Therefore, it returns @null@ in all valid cases because the mode string and the prefix string aren't equally long.

Fix PREFIX misparse (closes #854).

Not skipping the leading '(' when splitting on the ')' always makes the modes

list longer than the prefix list, which leads to an incorrect null return value.
