Smuxi Issues [FROZEN ARCHIVE] - Feature # 955: Additional Message Patterns

Status:	New	Priority: Low
Author:	Joel Bennett	Category:
Created:	02/18/2014	Assigned to:
Updated:	05/14/2015	Due date:
Complexity:	Low	
Subject:	Additional Message Patterns	
Description:	I'm using (?i) in all of these to turn on case-insensitive matching (just FYI)	
	Microsoft KB urls:	
	MessagePatterns/0/MessagePartPattern = (?i)\bKB\s*(\d+)	
	MessagePatterns/0/MessagePartType = url	
	MessagePatterns/0/LinkFormat = http://support.microsoft.com/kb/{1}	
	You know, RFCs should link to the HTML version	
	(but more to the point, MY patterns should win out over the built-in ones):	
	MessagePatterns/1/LinkFormat = http://tools.ietf.org/html/{1}	
	MessagePatterns/1/MessagePartPattern = (?i)\bRFC\s*(\d+)	
	MessagePatterns/1/MessagePartType = url	
	PEPs are harder: the numbers in the URL are required to be zero-padded to 4 digits, but nobody writes them	
	like that. I.e.: PEP 8 should link to: http://www.python.org/dev/peps/pep-0008/	
	This doesn't work right because the number is really a string:	
	MessagePatterns/2/LinkFormat = http://w	ww.python.org/dev/peps/pep-{1:D4}/
	MessagePatterns/2/MessagePartPattern = (?i)\bPEP\s*(\d+)	
MessagePatterns/2/MessagePartType = url		url

Thank you for sharing this nice patterns! The issue that built-in patterns are applied before your custom ones is actually a bug that should be covered in a separate report.
