| Subject: | chat list width not resizable (to smaller width) | | |
| Description: | the chat list panel has a minimum width that cannot be overcome by dragging the separator. As there are no aliases for chatrooms either, the list takes too much horizontal space. Together with bug #739 this reduces the usable area for actual text very much on smaller screens. You should be able to resize it to a smaller width, cutting off text, like it is possible with the nick list. Or alternatively have the chatlist and nicklist stacked above each other (but then the chatlist must auto-resize or scroll to show newly opened chats) | | |
