Your smuxi-frontend.ini broke, rename the file and it should start again. Also would be nice if you could paste or upload your broken file so I can see how the corruption possibly happened.

Copied from the file:

[Frontend]

UseLowBandwidthMode = False

ShowQuickJoin = True

ShowMenuBar = True

ShowStatusBar = True

[Frontend/Engines]

Engines =

Default =

Sorry.

I had the file on 2 users. The user I am using had just an empty file, and renaming/deleting the file solved the problem.

Thanks.

This happened once more.

My PC got a crash (instant), and again Smuxi would not start.

Removing the smuxi-frontend.ini fixes the problem (the file was empty this time too).
