Subject:	Backend/server has got stuck		
Description:	I noticed today that the chats on IRC Freenode had frozen. There was no clear indication from the frontend that this had happened, and I Was still able to type and (apparently) enter stuff into the chat.		
	Restarting the frontend did not change anything, so I assume the problem is with the backend.		
	I'm leaving it for now if there is interest in debugging the setup. If not, let me know, and I'll close/restart it.		
	A couple of oddities. There are now two top-level entries called "IRC Freenode" in the bar on the left, which shows the servers and channels. Only one of these (the second, going from top to bottom) has channels associated with it.		
	Also. the #freenode channel is completely blank, including the user list on the right. The other channels currently open are #lisp, #mercurial, and #mysql, all of which are frozen. All the channels except for #freenode have user lists on the right.
