Updated:	09/04/2014	Due date:
Subject:	Add instructions for building Debian packages directly from git repository	
Description:	It would be useful to have instructions on how to build	
	Debian packages from the git repository, for Debian people	
	who want to do testing of recent changes.	
	`README.md` seems like a natural place, or possibly a different file.	
	Maybe a file in the `debian/` subdirectory would be suitable.	
	However, I'd favor the `README.md`, since that is the most globally visible.	
	I'm not sure what the correct tag is. This isn't a bug or a feature request,	
	so I've used "Support". Please correct as necessary.
