Subject:	Tray icon lost on kde5 (plasma5)		
Description:	<p>Hi,</p> <p>I upgraded my desktop to plasma 5, and the tray icon is gone. Apparently plasma dropped support for xembed so applications now need to use libappindicator</p> <p>http://blog.martin-graesslin.com/blog/2014/06/where-are-my-systray-icons/</p>

Some further information:

A simple gtk2 tray icon does not work: <https://gist.github.com/pklaus/304963> . On this example no tray is shown on plasma5

But a simple appindicator does work: <http://www.eurion.net/python-snippets/snippet/Create%20an%20Application%20Indicator.html> (the icon has to be changed of course).

Also, I forgot to mention that notifications (ie, highlight indications) work: an OSD with the message appears. It is only the persistent tray icon that doesn't show.
