Complexity:	Medium		
Subject:	set away automatically when no connection to server		
Description:	It would be nice to appear as away to others when you are not connected to the smuxi-server.		
	I never used /away but relied on the bouncer to do that.

Automatically set and unset away state. (closes: #170)

When the last connected frontend disconnects from the session and when a

frontend connects again it will automatically update the away state for all

protocol managers.

This feature introduces a simple presence API which each protocol manager can

support. (closes: #454)

Thats a good idea, I planned to do that as some kind of "auto-away" plugin (once we have a plugin API that is). It could activate away based on inactivity or no connected frontends.

As there is no presence API to set "away" in a protocol neutral way, this is could be easy but its not. The Session object knows how many active frontends are connected (via the FrontendManager registry).
