Subject:	Donwload method problems		
Description:	<p>i'm trying to implement download sample code it looks like work but in the savepath location sometimes there isn't anything and sometimes appears a folder which it does not have anything, there aren't compilation errors.... then i'm so confuse</p> <p>-- UPDATE 1--</p> <p>well, i have changed MonoTorrent.dll 0.72 to 0.80 and i tried the download method again, now in the savepath appears file which i like download but its size is 0Kb i reviewed Torrent.State and it appears "Stopped", I need to Know How I Can Change that State or What is my fault?</p> <p>Thanks</p>

- Status changed from New to Rejected
- Priority changed from Urgent to Normal

As per the sample in the wiki you need to call 'Start' on the torrentmanager for it to actually download. I'm assuming you didn't do this. A torrent will never change itself to the Stopped state.
