Smuxi Issues [FROZEN ARCHIVE] - Bug # 367: Smuxi-server bugs

Status:	Rejected	**Priority:**	Normal
Author:	Michal Dziczkowski	**Category:**	Server
Created:	04/26/2010	**Assigned to:**	Mirco Bauer
Updated:	06/07/2010	**Due date:**	
Complexity:			
Subject:	Smuxi-server bugs		
Description:	I had found following bugs by Smuxi-server: * no configuration file of Smuxi-server is available (or it's much hidden), so there is no possibility to configure the server * after starting the server and opening the browser on the port given in console, there is opening a blank page * there is no interface to manage the server (there should be an software interface in case if the web one won't work)		

History

- 1 set to invalid

The smuxi-server is controlled using parameters as explained in the "Server HowTo" from the website:

<pre>
smuxi-server --help
Usage: smuxi-server [options]

Options:
    --add-user   Add user to Server
    --modify-user   Modify existing user of Server
    --delete-user   Delete user from Server
    --username=VALUE   User to create, modify or delete
    --password=VALUE   Password of the user when creating or modifying a
                   user
 -d, --debug   Enable debug output
 -h, --help   Show this help
</pre>

With do whole respect, but with such poor configuration with the command line offer, you can't do proper server management. I had meant that there is no configuration file there.

Except of that, the second part of the report (the blank page problem) hasn't got answered.

There are configuration files in ~/.config/smuxi, but they are not meant to be changed by hand because it's error prone.

The server part has no GUI nor a web interface as it will usually run on a head-less server with no X installed... or do you mean in the case of windows?

The mentioned files configure in the most the client. The server should have a seperate config file for better management
