Complexity:	Medium		
Subject:	Configurable logging path		
Description:	It would be great if Smuxi had configurable logging paths like Xchat does. For instance I can configure my log filename to be %n/%c/%F.txt which inside my xchat directory would store today's log as network/channel/date.txt. It keeps all log files organized nicely and log files from becoming enormous. It's also great for when searching through logs, the file the search redults in is the date the conversation happened. Full list of variables xchat uses are here - http://xchat.org/docs/log/ My logs from the #smuxi channel would be stored as jjarzynka@irc.oftc.net/#smuxi/2010-09-28.txt (filename would change daily) PM's would be jjarzynka@irc.oftc.net/meebey/2010-09-28.txt
