Subject:	Acronym help when acronyms are present in a message		
Description:	When a user is typing a message, allow them to help with indicating an acronym by using a special format or characters. For instance use [] or maybe ^ to indicate the acronym. ^FWIW you don't know jack or [FWIW] you don't know jack You could maybe even do some kind of intellisense off of it. [F *F*or *W*hat *I*t's *W*orth Then Smuxi sends it like this for other's to read: 12:00 <user> +FWIW+ you don't know jack FWIW has some kind of visual indicator for people, like an underline or a color. Then when the user places their mouse over the underlined acronym, it shows "For What It's Worth" in a tip box.
