

## Smuxi - Bug # 527: Set process name

<b>Status:</b>	New	<b>Priority:</b>	Normal
<b>Author:</b>	Michael Monreal	<b>Category:</b>	Frontend GNOME
<b>Created:</b>	10/16/2010	<b>Assigned to:</b>	Mirco Bauer
<b>Updated:</b>	04/29/2013	<b>Due date:</b>	
<b>Complexity:</b>	Low		
<b>Found in Version:</b>			
<b>Subject:</b>	Set process name		
<b>Description:</b>	The process name currently seems to be "mono" (as shown in gnome-system-monitor). This should be the actual application name instead.

- *Complexity set to Low*

Are there some GNOME guidelines or specifications about this? I wonder because Tomboy is not doing this and is part of the official desktop.

**04/29/2013 11:14 AM - Kai Korla**

I think there are no guidelines for this, but it makes the user happier. With this feature you will identify smuxi processes in htop or gnome-system-monitor better. Also a do "killall smuxi-whatever" is possible. In my opinion mono should handle this, but it wont fix it: [https://bugzilla.novell.com/show\\_bug.cgi?id=147947](https://bugzilla.novell.com/show_bug.cgi?id=147947).

A workaround is to use the "prctl" (<http://man7.org/linux/man-pages/man2/prctl.2.html>). If desired, i can do it and make a pull request then.

regards

Kai

You can do this but please watch out for Linux, \*BSD, Mac OSX and Windows differences
