Subject:	Stop() hangs stopping.		
Description:	Hello, I'm having this issue with MonoTorrent. everytime I call Stop() in a manager, it hangs in Stopping forever. How can I solve this? There is another Problem. Some torrents don't even start download, they hang hashing when I add them!

I have just started working on a project using this library and am also encountering this issue. Is there a work around or does anybody know where in code to fix this?

Thanks!

Is this still an active project? This library seems well suited for the project I am working on, but having inconsistent stopping capability is keeping me from being able to implement some core functionality I need, I.E., stopping the torrent, then moving it to where it needs to be on my network. Its frustrating, as everything else works fantastically, and to have such a small issue be a show stopper... Basically, whenever my torrent finishes, the desired behavior would be to stop seeding it and move it to a catagorized location on my network, but over 50% of the time, after issuing the stop command, the engine stays in the stopping state forever...
