Complexity:	High		
Subject:	Tab stacking		
Description:	<p>Managing a large number of tabs in a traditional fashion can easily get unorganized - a solution to this could be implement a tab stacking feature (see Opera 11 for an example of how this can be successfully implemented: http://is.gd/DKgwtn). Using this feature, users could drag tabs into each other to combine them into a tab group - this group could then be used as a drop-down menu to switch between the tabs in it. Tabs could naturally be dragged in and out of groups at any time.</p> <p>This would make it easy to sort and organize tabs with minimal effort, easily use Smuxi with a large number of tabs, and find the tabs you want to switch to much faster.</p>

Doing it the way Opera does it would be hard, but a start could be to use a `@TreeView@` and have collapsible grouping tabs in the vertical view.
