Complexity:			
Subject:		Abort 2nd connection to the same IRC network	
Description:		Smuxi needs to abort the connection to an IRC server if it is the 2nd connection to the same IRC network. The IRC network name returned by the IRC server doesn't have to match the one the user supplied in Smuxi when the server was added. For this reason it has to checked as soon as the real IRC network name is known. The needed check in #646 alone is not sufficient because of that.
