

Smuxi - Bug # 682: Duplicate query windows from the same user

Status:	New	Priority:	Normal
Author:	Patrick M	Category:	Engine IRC
Created:	01/25/2012	Assigned to:	
Updated:	01/27/2012	Due date:	
Complexity:	Medium		
Found in Version:			
Subject:	Duplicate query windows from the same user		
Description:	<p>Did a search on the topic but couldn't find anything related therefore I am making a new ticket.</p> <p>How to reproduce:</p> <p>Say I am chatting with user <i>*userA*</i> in private and suddenly he decides to change his name to <i>*userB*</i> and sends me another message.</p> <p>This opens up another query window from <i>*userB*</i> leaving me with a conversation that is split amongst two screens.</p> <p>The expected behaviour:</p> <p><i>*userA*</i> changes name to <i>*userB*</i> -> query window is updated to <i>*userB*</i> so private messages still go in to the same window.</p> <p>The solution:</p> <p>Granted that the user is in at least one common channel smuxi would be able to detect the namechange and update the users nickname accordingly.</p> <p>Possible problems?</p> <p><i>*UserA*</i> disconnects and <i>*userC*</i> changes his/her name to <i>*userA*</i> and sends a private message -> the old <i>*userA*</i> window is reused for a different user</p>

I agree that Smuxi should do this but right now the protocol of Smuxi does not support renaming a chat, neither the ID nor the name. The protocol will be re-designed around 0.9 or a 1.0 release, which will then support this, see: <http://live.gnome.org/Smuxi/Protocol/Zero>
