Subject:	"Invite to" user context menu should not contain channels from all servers		
Description:	When you right-click on user in the user list, and you're using more than one server, the Invite To submenu will contain channels from all the networks you're using. This is wrong, since the user might not be on the same networks as you are and, in fact, they might not be authorized to access some of the networks you're logged into.
