Subject:	Filtering on Protocol/Server does not work.		
Description:	The faq here: https://www.smuxi.org/ezfaq/show/smuxi?faq_id=13		

Says that I should be able to apply a filter to an entire server, using the "Protocol/Server" type and the name of the server.

I attempted to apply a join|quit filter on chat.freenode.net this way, but it does not work. The same filter works on individual channels, but listing every single channel I join on freenode would be painful ... and beyond the limits of the #name field.

Filter terms:

IRC | Protocol/Server | chat.freenode.net | Event | /(join|left|quit)/

- Status changed from New to Rejected

The Protocol/Server Chat Type applies to messages shown server tabs, say the MOTD or specific IRC reply codes. You probably want to filter a message of a group or person chat depending on the server, this is something else and is not implemented yet. Feel free to make a feature request for this as it should be possible to do such (and shouldn't be that hard to implement anyhow).
