Subject:	Context-menu "Query" item on nickname should be highlighted		
Description:	As the action done when you double-click on a nickname is "Query", then this action should be highlighted in the context menu. The most common way of highlighting I've seen in many apps is: - Place the item as the first in the context menu. - <i>*AND*</i> Mark the item as bold. Patch coming.

[Frontend-GNOME-IRC] Highlight main action in context menu (closes: #869)

Most GUI guidelines recommend that context menus should highlight the action that is performed when double-clicking the item. This action, on a nickname, is the Query, and we now place it the first on the menu, and place a separator after it.
