Subject:	Store password in system keyring (via libsecret)		
Description:	Hello, please store the passwords in the system keyring using the cross-platform libsecret. I am not sure if there is a C# library for libsecret, but you could use the @secret-tool@ program as a subprocess to do the work for you. Something like <pre> secret-tool store --label="Smuxi password" protocol IRC network irc.freenode.net account infinity0 secret-tool lookup protocol IRC network irc.freenode.net account infinity0 </pre>

- Category set to Frontend GNOME

If the API of libsecret is simple enough it can be p/invoked directly from Smuxi. But using and shipping this library on Mac and Windows will be troublesome. Also this probalby only makes sense for standalone frontends (local engines).
