Found in Version:	0.11+dev.bzr411		
Subject:	XMPP: bad user experience when message from server 'foouser@axmppservername.net wishes to subscribe to you'		
Description:	I connect to a XMPP server named axmppservername.net, then I join a room, then a user sees me there and he seems to invite a contact request, then Smuxi tells me in the "Contacts" tab: 'foouser@axmppservername.net wishes to subscribe to you' This is bad because I don't know how to act on that. There doesn't seem to be an /accept command or a /subscribe one that receives the user email id as an argument. Using Smuxi Vendor: Debian 2:0.11+dev.bzr411~ubuntu13.04.1 Frontend: GNOME 0.11.0.0 Engine: 0.11.0.0		

History

01/28/2014 05:23 PM - Andrés G. Aragoneses

- Category set to Engine XMPP (Jabber)

01/28/2014 05:33 PM - Andrés G. Aragoneses

- File HowPidginActs.png added

This is how pidgin does it.

> There doesn't seem to be an /accept command or a /subscribe one that receives the user email id as an argument.

it is planned for the future to be similar to pidgin (like clicking a link to accept or deny)

right now you use "/add emailId"

though it could be added to the message as a hint and for copypasting
