

Smuxi Issues [FROZEN ARCHIVE] - Feature # 955: Additional Message Patterns

| | | | |
|--------------|---|--------------|-----|
| Status: | New | Priority: | Low |
| Author: | Joel Bennett | Category: | |
| Created: | 02/18/2014 | Assigned to: | |
| Updated: | 05/14/2015 | Due date: | |
| Complexity: | Low | | |
| Subject: | Additional Message Patterns | | |
| Description: | <p>I'm using (?) in all of these to turn on case-insensitive matching (just FYI)</p> <p>Microsoft KB urls:</p> <p>MessagePatterns/0/MessagePartPattern = (?)\bKB\s*(\d+)</p> <p>MessagePatterns/0/MessagePartType = url</p> <p>MessagePatterns/0/LinkFormat = http://support.microsoft.com/kb/{1}</p> <p>You know, RFCs should link to the HTML version...</p> <p>(but more to the point, MY patterns should win out over the built-in ones):</p> <p>MessagePatterns/1/LinkFormat = http://tools.ietf.org/html/{1}</p> <p>MessagePatterns/1/MessagePartPattern = (?)\bRFC\s*(\d+)</p> <p>MessagePatterns/1/MessagePartType = url</p> <p>PEPs are harder: the numbers in the URL are required to be zero-padded to 4 digits, but nobody writes them like that. I.e.: PEP 8 should link to: http://www.python.org/dev/peps/pep-0008/</p> <p>This doesn't work right because the number is really a string:</p> <p>MessagePatterns/2/LinkFormat = http://www.python.org/dev/peps/pep-{1:D4}/</p> <p>MessagePatterns/2/MessagePartPattern = (?)\bPEP\s*(\d+)</p> <p>MessagePatterns/2/MessagePartType = url</p> | | |

Thank you for sharing this nice patterns! The issue that built-in patterns are applied before your custom ones is actually a bug that should be covered in a separate report.
