

## Smuxi - Feature # 955: Additional Message Patterns

<b>Status:</b>	New	<b>Priority:</b>	Low
<b>Author:</b>	Joel Bennett	<b>Category:</b>	
<b>Created:</b>	02/18/2014	<b>Assigned to:</b>	
<b>Updated:</b>	05/14/2015	<b>Due date:</b>	
<b>Complexity:</b>	Low		
<b>Subject:</b>	Additional Message Patterns		
<b>Description:</b>	<p>I'm using (?i) in all of these to turn on case-insensitive matching (just FYI)</p> <p>Microsoft KB urls:</p> <p>MessagePatterns/0/MessagePartPattern = (?i)\bKB\s*(\d+) MessagePatterns/0/MessagePartType = url MessagePatterns/0/LinkFormat = http://support.microsoft.com/kb/{1}</p> <p>You know, RFCs should link to the HTML version... (but more to the point, MY patterns should win out over the built-in ones):</p> <p>MessagePatterns/1/LinkFormat = http://tools.ietf.org/html/{1} MessagePatterns/1/MessagePartPattern = (?i)\bRFC\s*(\d+) MessagePatterns/1/MessagePartType = url</p> <p>PEPs are harder: the numbers in the URL are required to be zero-padded to 4 digits, but nobody writes them like that. I.e.: PEP 8 should link to: http://www.python.org/dev/peps/pep-0008/</p> <p>This doesn't work right because the number is really a string:</p> <p>MessagePatterns/2/LinkFormat = http://www.python.org/dev/peps/pep-{1:D4}/ MessagePatterns/2/MessagePartPattern = (?i)\bPEP\s*(\d+) MessagePatterns/2/MessagePartType = url</p>

Thank you for sharing this nice patterns! The issue that built-in patterns are applied before your custom ones is actually a bug that should be covered in a separate report.
