Found in Version:			
Subject:	Issue with URL detection which contain: '		
Description:	I just noticed the following in #mercurial http://en.wikipedia.org/wiki/Godunov's_scheme However, the link was not properly constructed - it stopped before the comma. So clicking on this gave http://en.wikipedia.org/wiki/Godunov This seems like a minor bug. I can't see any reason why this would behave this way. Off the top of my head, I'd say this was an escaping issue. Regards, Faheem
