| Subject: | Individual server usernames are ignored and only the global username is used | | |
| Description: | Under Ubuntu using the smuxi-engine, when I set my username for a particular service it is not respected. Instead only the global username is used. <br><br> e.g. my global username is "joey" and if I set OFTC for "Rinchen" it still attempts to log me in as "joey". Since "joey" is Joey Schmidt I get "NickServ (services@services.oftc.net)- Nickname joey_ is not registered."  and I have to manually /nick.  This happens on every system I've tried (e.g. efnet). | | |

## History

*- Status changed from New to Closed*

*- Target version set to 0.11.1*

*- % Done changed from 0 to 100*

*- Complexity set to Medium*

I could finally find someone who has the same issue and I was able to track it down and fix it!

Fixed in commit:967ab9a8aa38795a49670708cb0d5664c9fc3c9d

So if you upgrade your smuxi-server to the daily PPA or make a build from Smuxi's stable branch, this issue goes away.

For the record: the bug was in the deserialization of ServerModel objects when sent over remoting to the smuxi-server.
